

mxHero Mail2Cloud provides intelligent email to ShareFile integration, enabling organizations to better secure, govern and manage their important email content. mxHero automatically archives email messages and attachments tagging them with email metadata **seamlessly extending ShareFile's powerful Governance capabilities to the organization's email content.**

## The mxHero Advantage

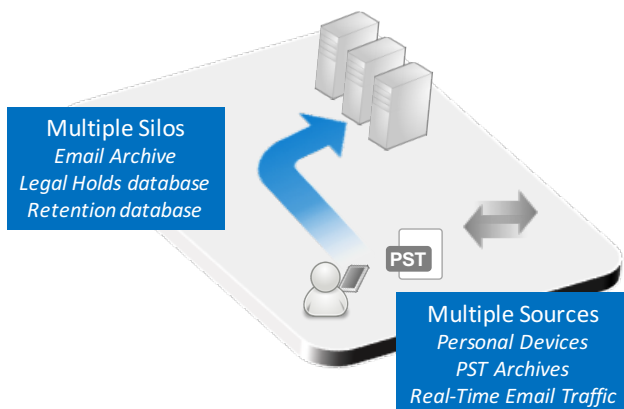

- Seamless & Transparent to end users – **no changes** to how email is used today
- **No hardware** or software required
- Works with **all email systems** - on prem. and cloud (Exchange, O365, G Suite, etc.)
- Works across **every device** (mobile, desktop, etc.)
- No end user downloads or training
- Outlook add-in for easy **drag & drop** email to ShareFile

## Product Spotlight

- ShareFile features extended to email content
- Complete cloud-based service
- **Central control** via web based Administration Panel
- Transparent capture, **security** & governance of emails
- Preserves email message and stores them side by side with attached documents
- Automatically tags email messages and attachments with email metadata (sender, recipient(s), date, etc.)

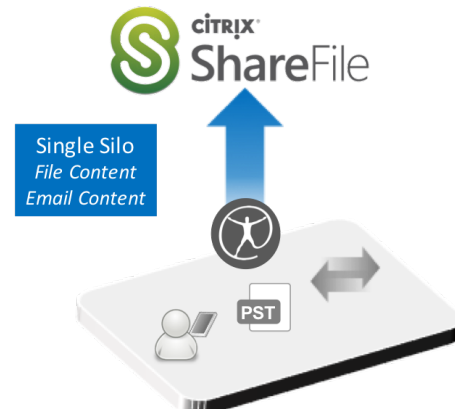

Projects are modified, blueprints adjusted, budgets extended, statements of work modified usually via email messages. Email is an important record of your business transactions and agreements, your compliant communications, and regulated conversations. Just like you do with files you need to manage email to meet regulatory, compliance, and organizational information security and retention policies. mxHero simplifies your current email governance practices by capturing email from any source, intelligently analyzing the contents, appropriately tagging it, and organizing it into folders managed by ShareFile. mxHero and ShareFile provide security & governance from a single, simple solution for all your content – document and email. Architecture simplified, CAPEX eliminated, risks reduced, compliance and information governance functions simplified.

### Legacy Email Governance

- **High Costs** for multiple components
- **Content sprawl** across silos
- IT Skill Set & **Support burden**
- **Risks** of **leakage** & **over retention** multiplied across platforms

### Email Governance with mxHero & ShareFile

- **Single Pane** of Glass
- Content **consolidation** & IT **simplification**
- Content based **intelligent security**
- ShareFile **Governance**, search, collaboration & mobility

## Governance Features

### Transparent Security

The best security requires no end user action. MxHero's can analyze email and attachment content in real-time ensuring that sensitive information is protected using ShareFile security features, such as, password, time access expiration, read-only, internal access only, security watermarks, etc. Be alerted when specific security actions on messages are triggered.

### ShareFile Link Integrity

Unlike standard email attachments, the files ShareFile links point to can be deleted or altered. This quickly becomes a compliance nightmare compromising the email record. MxHero can ensure that ShareFile links in archived messages are preserved with the original content.

### Intelligent Filing

Automatically & selectively store email to specific ShareFile folders based on email content without user intervention. mxHero uses email header information (To, From, Subject, etc), any string, or pattern in the message or attachments to target the correct ShareFile folder for storage. In ShareFile the content is protected with versioning, retention, legal hold, access security, and the full power of any ShareFile feature.

### Automatic Metadata Tagging

The date when you store a file to ShareFile is not enough to facilitate e-discovery, retention, or governance of messages and content received via email. MxHero augments ShareFile metadata with key email header information (To, From, Subject, Send or Received Date, etc.). for rapid search across email and attachment content.

### Open and fully integrated with any email repository

Email content resides in multiple platforms multiplying costs and increasing risk of over-retention. mxHero connects with most legacy archiving platforms or email servers and migrates email content to ShareFile. Sunset expensive on-prem archives (e.g., Veritas, GFI Archiver, etc.) and legacy email (Notes, .pst files) and centralize governance of all content from a single powerful platform: ShareFile.
